DETAILED ACTION

Drawings

1. The drawings are objected to because 'S1' of figs. 2a-b contain a typographical error. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required

corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat No 5,910,847 issued to Van der Werf et al.
3. Van der Werf et al disclose a substrate-testing device (see for example col.2, lines 46-64).
4. Van der Werf et al disclose a testing unit for optically detecting an alignment mark on the substrate (col.8, lines 54-57; col.9, lines 35-45).
5. Van der Werf et al disclose a substrate position-calculating unit (col.9, lines 28-35).
6. Van der Werf et al disclose a position-aligning unit, wherein the unit allocates the tested result to the substrate (col.9, lines 21-62).

7. As per claims 2 and 6, Van der Werf et al disclose aligning a defect result obtained by a defect test based on the tested result with the substrate position (see col.9, line 63-col.10, line 38).
8. As per claims 3-4, Van der Werf et al disclose a CCD camera (i.e. a television camera (see col.9, lines 38-41).
9. As per claim 5, Van der Werf et al disclose acquiring a tested result of the substrate by the scanning of an electron beam (see col.2, lines 6-10).
10. Van der Werf et al disclose optically detecting an alignment mark on the substrate (col.8, lines 54-56).
11. Van der Werf et al disclose calculating a substrate position within the substrate-testing device (col.9, lines 28-35).
12. Van der Werf et al disclose aligning a position of tested result with the calculated substrate position (col.9, lines 21-62).
13. Van der Werf et al disclose allocating the tested result to the substrate position (see col.2, lines 6-10).
